Risk Description	Vulnerability	Impact	Cost	Probability	Strategy Management
Lack of interest due to reduction engagement with traditional books or existence of alternatives to it (e-books, podcasts e.g.	The idea of the project came from a student without knowledge of the markets or schools/educational institutions and without means of communication with the respective responsible	Fewer customers	Big: Failure of the project in financial terms and damage to the company	Medium: Software solves a common problem of managing and organizing a library, but this is not always a problem	Survey of potential buyers of the and counting of software buyers lending libraries and how many people use them
Inability to implement the personalized search engine as designed	No member has experience of applying machine learning	Members should be trained in technology and dedicate the appropriate time, which may increase the cost. Failure to complete it may reduce the quality of the project	Medium: Training the team in such a subject may require some financial resources	Medium: A common search engine may be easy to implement with basic knowledge, but how "smart" it will be required specialized knowledge	Training of team members in programming languages that providing these capabilities
Small innovation in the functionality of the project	There has been many similar software over the years	Failure of the project to stand out from existing projects and win over the competition	Medium: Lack of innovation may lead to difficulty in promoting the software	Great: The possibility of innovation in this kind of software is very difficult as it is one of the most trivial software	Identification of the shortcomings of existing software and harmonization with modern user requirements
Large program requirements from the user	The nature of the project may require knowledge that the average user does not possess	Discouraging potential buyers due to difficulty in execution	Medium: Difficulty in establishing the software in the market, and need to support users through technical support	Great: The existence of specialized search techniques "weighs" on the program	Test sessions with prospective users to make the program as easy to understand and use as possible, without requiring technical knowledge
Large program requirements from the computer system	Some functions require a large amount of computer RAM capacity	Reduction of potential customers due to high computing requirements and the need to purchase expensive hardware	Big: Difficulty in establishing the software in the market and customer attrition due to unsatisfied system requirements	Medium: The existence of certain functions Medium. However, this may not always be an obstacle.	Limitation on the maximum size of the database to bind a predefined portion of memory
Need to install third-party programs to run the software	To build certain functions of the software are necessary to use programs that do not included in it	It makes the installation of the program more difficult and may require financial resources to secure their license	Medium: The need to secure licenses agreements may require financial resources	Great: The existence of certain project functions (search engine and data analysis) is necessarily performed through external programs	Finding alternative techniques to avoiding their use and experimenting with other programming languages and other technologies
Distrust of prospective customers as to	Customers' refusal to understand how converting the traditional library	Reduction of potential customers and difficulty in	Medium: Attempting to persuade prospective	Medium: As the software concept is based on existing ones, it	Providing a free period of use so that customers can experience

the usefulness of the software	management process to electronic can help	establishing the software on the market	buyers may require means that require financial resources	is already being used to some extent. However, it will be a challenge to start being used by people who are still using the traditional form of the software	the usefulness of the software without spending money
